POT-GROWN PERENNIALS

BULBS FOR EARLY FORCING

SEEDS FOR SUMMER SOWING

**R. & J. FARQUHAR & CO.**

6 and 7 South Market Street

— Boston, Mass.

## STRAWBERRY PLANTS.

All the varieties offered are perfect-flowering (bisexual) except where marked *P.* The latter are pistillate and require a row of a perfect-flowering sort planted every 8 or 10 feet to pollinize their blossom.

These, if planted in July and August, produce a large crop the next summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

**POT-GROWN PLANTS.** From 2½ in. pots, well rooted; delivery in July and August. Per 100, \$3.50; 250, \$8.00; 500, \$15.00; 1000, \$30.00; for all varieties, except where otherwise priced.

### FIRST EARLY.

**Alpha.** A new very early variety, producing strong, vigorous plants which are very productive. The fruit is of large size, attractive color and fine quality. \$4.00 per 100; \$38.00 per 1000.

**Excelsior.** This is decidedly the best early Strawberry and the earliest good strawberry. The fruit is of round conical form, glossy, dark-red color, and of mildly acid flavor.

**Success.** Large, round, bright scarlet, flavor always fine.

**St. Louis.** A very productive, early variety, with large berries, similar to Excelsior. The plant is of vigorous growth and a good sort for the home garden.

**Suburban.** This berry is exceedingly productive, thriving well on light land, and is considered one of the best new sorts. Fruit large, conical, firm and of good flavor. \$4.00 per 100; \$38.00 per 1000.

**Early Ozark.** One of the most productive early varieties, producing large dark-red berries of rather acid flavor but very delicious. The plants are of vigorous growth with fine dark-green foliage.

### SECOND EARLY.

**Climax.** This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties.

**Glen Mary.** Large, conical, bright red berries; firm and of fine flavor.

**Sample. P.** Excellent for either market or home use; prolific, large, firm, and delicious.

**Senator Dunlap.** Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a berry better than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, rich and dark red clear to the centre, with a very rich flavor.

### MEDIUM.

**Abington.** A strong growing native variety of recent introduction. The fruit is of large size, bright red in color, very solid and of excellent flavor.

**Barrymore.** This fine strawberry was awarded a Silver Medal by the Mass. Hort. Society in 1908, for its excellence. The plants are of strong growth and very productive. **STRAWBERRIES.**—*Continued.***MEDIUM.**

**Brandywine.** A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre and of rich spicy flavor. A great cropper especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

**Golden Gate.** A strong growing variety bearing rich crimson fruit without green tips and with quality similar to the *Marshall*. It blooms early and late, making it a good variety to pollinize the pistillate sorts.

**King Edward.** A very productive mid-season variety with large conical glossy-red berries of delicious flavor. The plants are of strong healthy growth with large dark-green foliage.

**Longfellow.** The plants of this fine new variety are of vigorous growth and very productive. Fruit highly colored, conical in shape and inclined to be long.

**Marshall.** The fruit of this remarkable sort is of enormous size, of handsome, glossy, dark crimson color, and of delicious flavor. It is one of the best midseason berries, either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

**New York.** One of the best sorts for private or market gardens. The berries are large, of conical form; dark red color, firm texture and of remarkably sweet flavor. In the market they sell at sight.

# FARQUHAR'S NEW AND RARE PLANTS FROM THE WILDS OF CHINA.

Collected for the Arnold Arboretum of Harvard University by the indefatigable plant collector, Mr. E. H. Wilson, in remote and hitherto unexplored regions.

Gold Medal Awarded by the Massachusetts Horticultural Society.

**A** NUMBER of these plants were offered by us last year for the first time. We now offer for the first time another group of these plant treasures.

They are attracting universal interest, many orders coming from Europe, Japan and other distant parts of the globe.

They are unquestionably the finest plant novelties extant.

**AMPELOPSIS Henryana.** (*Vitis Henryana*.) In habit, this new climber resembles our native woodbine. The ground color of the leaves is dark velvety green, with the mid-rib and principal veins silvery white. The foliage has a very striking appearance in autumn when the ground color changes to vivid red, the mid-rib and vein remaining white. In Massachusetts, this vine requires protection during winter, but would probably prove quite hardy south of New York, or even farther north where the influence of the ocean moderates the temperature. Award of Merit by the Royal Horticultural Society of London. Each, 50 cts.; dozen, \$5.00.

**AMPELOPSIS Thomsonii.** (*Vitis Thomsonii*.) This charming new climber is one of the most beautiful of the Woodbine family. It requires protection during winter. The leaves are greenish purple above, and bright claret color beneath; changing in the autumn to rich red. Award of Merit by the Royal Horticultural Society of London. Each, 50 cts.; dozen, \$5.00.

**AMPELOPSIS aconitifolius dissecta.** A perfectly hardy vine, growing 8 to 10 ft. tall, with elegantly dissected foliage and bright blue fruit; splendid for trellises. Each, 75 cts.; dozen, \$7.50.

**BERBERIS brevipaniculata.** A bush 4 to 6 ft. tall with wedge-shaped small leaves clustered together and assuming fine tints in autumn. The small yellow flowers are freely produced on erect panicles 3 to 5 in. long. These are followed by masses of salmon-red fruits in early autumn. The foliage is retained very late. Its several fine qualities make this new Barberry one of the handsomest and most distinct of its class. Each, 50 cts.; dozen, \$5.00.

**BUDDLEIA asiatica.** "*White flowered Winter Lilac*." An elegant pot plant suitable for general decorative purposes and cut flowers. Cultural requirements, same as those of Chrysanthemum. Blossoms December to March; every shoot terminating in a slender tail of pure white, deliciously fragrant flowers. A notable acquisition. Each, 40 cts.; dozen, \$4.00.

In the descriptions (S) is used to signify standards or the erect petals; (F) falls or the drooping petals.

## FARQUHAR'S GOLD-MEDAL PÆONIES.

The Gold Medal of the Massachusetts Horticultural Society was awarded to R. & J. FARQUHAR & CO. for a Display of Pæonies, June, 1913.

Pæonies require a good, rich, deep soil and an abundant supply of water during the growing season. When enriching the ground the use of too much fresh manure near the roots should be avoided. An important point to observe is not to plant too deep. The roots should be planted so that the eyes will be 2 to 3 inches below the surface. Too deep planting is a frequent cause for shy flowering.

**LILIES FOR FORCING.**

The bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mold, rotted cow manure, and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

# PANSIES.

**Culture of Pansies.**—Pansies thrive best in a cool, moist, but well drained soil, enriched with well rotted barnyard manure, or fine ground bone. Seeds sown in spring in a partially shaded situation will produce fine plants for autumn flowering. The finest blooms are to be obtained, however, by sowing in July or August, giving the plants protection during winter, when they will bloom profusely in the spring and summer.

**Giant Park Sprinkler.** This Sprinkler is designed for watering large areas like public or private parks, estates, polo or golf club grounds, baseball grounds, cemeteries and truck gardens, quickly and economically. When in operation, the two spray arms slowly revolve, spreading the water uniformly in a rain-like spray over an area having a diameter of 80 to 150 feet. The capacity of the sprinkler varies from 100 to 200 gallons a minute according to the operating pressure and is about fifty times that of the ordinary lawn sprinkler now on the market. The necessary water pressure is about thirty pounds per square inch, and it is found that at this pressure it takes about forty minutes at each set-up to wet the soil thoroughly six inches deep. It does not flood or wash the grass roots. This machine has an average capacity of two acres per day, and one man can easily take care of three machines. The great amount of time and labor saved by using these sprinklers soon defrays the initial cost apart from the fact that no other existing method will do the work so effectively or so greatly benefit the lawns and trees. A four-inch supply pipe is required to operate this sprayer successfully.

The machine is mounted on a substantial truck and is fitted for 2-inch or 2½-inch hose connection. Price, \$75.00.

ENGLISH AND JAPANESE GARDEN CONSTRUCTION.

Rustic work is now regarded as an indispensable element in natural garden composition.

Each situation calls for its own particular treatment, and we, therefore, aim to adapt our work to its environment. For this reason, we rarely build two Pergolas or Summer Houses alike.

We are prepared to furnish estimates on contemplated work. In our construction we use red cedar, white cedar, black Canadian spruce and laurel.
